Very comprehensive, not terribly technical, excellent summary/overview material. Book description and reviews helped me a lot. Would recommend it to folks fairly new to the LF space.

This book is an excellent guide for all readers. Clear and concise explanations of how credit markets work and the instruments that drive them. The chapters are segmented by financial product and written by an expert in that particular discipline, which gives the reader exposure to different authors. One of the best leveraged finance books I've read.

The high-yield debt market (junk bonds) is a major sector of the financial industry, with more than \$600 billion traded annually, and interest in the market is on the rise. Features the insights of Marty Fridson (Fridson Vision), Sam DeRosa (CSFB High-Yield), Peter Tufano (Harvard University), and Darrell Duffie (Stanford University), among others. Includes models for analyzing probabilities of default and recovery.
