authors went into more detail on how to address/manage those that exhibit the traits that they dissect. For that reason it doesn't get the full 5 stars. 7 of 7 people found the following review helpful. What lies beneath

As a first line supervisor in a police department, I am required to supervise down and accept from above. This book helps me understand why and how messages from above are received below. I've learned some of the hidden motivators for employees and supervisors alike. This should be required reading for any new supervisor. It will help him understand what is happening beneath the surface of the organization and the people.

Perfect book if you want to better understand the reactions of your employees and where they are coming from. Gets you to a point to double check your managing style and think about all the times you were projecting your anger on your own manager.

Allcorn and Diamond argue that the workplace has become ever more threatening to employees, and that they respond by creating psychological defenses that make the workplace ever more dysfunctional. To keep organizations competitive and sustain the value of their stock, management demands constant improvements in their employees' performance, but often the result is just the opposite of what management wants. Allcorn and Diamond explore this process in depth, and introduce a comprehensive and internally consistent, psychologically informed model of human development and behavior, one that explains for the first time the nature of the psychologically defensive workplace. In doing so, they challenge readers to think systematically about the psychological side of the workplace and to understand the importance of dealing effectively with employee defensiveness. The result is an authoritative study with valuable lessons and immediate benefits for corporate executives, and for scholars and researchers in organizational behavior in the academic community. Allcorn and Diamond's model is applicable to understanding five aspects of the workplace: first, how individuals respond to its stresses and anxieties; second, the psychologically defensive nature of interpersonal relationships at work; third, what the psychologically defensive group processes are; fourth, the dynamics of psychological defenses; and fifth, how the model is used to understand the connection of all organizations to the larger society in which they are imbedded. The authors' goal is to help management understand what actually is going on in today's workplace, the consequence of downsizing and other cost-reduction initiatives, and how important it is for management to relieve the problems they cause.

... "give the reader a worthwhile way to view an organization that is asking for help when its dysfunction's are hinging its mission of success. An EAP consultant can use this book to gain a better understanding of why and how individual employees perform, react and challenge change in the workplace. This alone is a very valuable asset." - Employee Assistance Quarterly "[a]n excellent exploration of workplace dynamics and tensions from a psycho-dynamic and psychoanalytic perspective. It really is a good read and is one of the best expositions of psychoanalytic thinking applied to leader and employee behaviour that I have read." - The Occupational Psychologist "Yacute;auml;n excellent exploration of workplace dynamics and tensions from a psycho-dynamic and psychoanalytic perspective.
