Paul Driessen : Miracle Molecule: Carbon Dioxide, Gas of Life before purchasing it in order to gage whether or not it would be worth my time, and all praised Miracle Molecule: Carbon Dioxide, Gas of Life:

0 of 0 people found the following review helpful. Let's hear it for the CO2 breathers, "Hip, Hip, Hooray!" By Jim Buchanan A useful reminder: For some reason media has become incredibly negative; look at any weather report and you will hear tainted data, "This is the hottest/coldest/wettest/driest, day/week/month/year/century on record!" A few weeks ago I was staggered to hear an ABC presenter claim that the Pacific Ocean average temperature was the hottest it has been, "...since the 18th century!" I only wished I had the chance to ask what record was this taken from? Perhaps a whaler throwing a bucket over the side of his ship to pull up a sample of water that he tested with his trusty

thermometer? At last some light in the darkness: CO₂ is good for all life on the planet. Without enough of it, we will all die. Every human breathing today breathes out more CO₂ than he/she breathes in. Remind the next "global warming doomsayer" of that fact when they are breathing in your face... 2 of 2 people found the following review helpful. Co₂ the miracle molecule WOW we need more. By J4D So fanatic environmentalism has it wrong. Co₂ it turns out isn't a 'pollutant' it is actually ESSENTIAL for continued life on this planet and much HIGHER levels (double or triple) would be beneficial to every aspect of life. Take an hour or less and read this book, you will be amazed. I was!!! 0 of 0 people found the following review helpful. I would recommend this as a guide for teachers who want honest ... By J. Shontz A timely offering of no-nonsense descriptions of how carbon dioxide sustains all life on Earth. It should be made available in softcover, because oddly, not all people have access to kindles. As a teacher, I would recommend this as a guide for teachers who want honest material about the environment. I would definitely recommend this to anyone who is puzzled by differing opinions on who best can decide what's right for the world—; the elitist "so-called Environmentalists" or God.

The astonishing story of a simple chemical that made life on Earth possible and continues its work today. Tiny amounts of this miracle molecule not only make life on Earth possible, but rising atmospheric CO₂ levels also spur forest and crop growth, help plants survive heat and drought, and feed the world.
